Quick Tips to Get Started with Accessibility

- Label Headings, buttons and other elements of your website or app. Screen readers can navigate to specific elements if labeled properly.

- Use dynamic text for app. This means that the text will automatically adjust to the size designated by the user for their device. It's a helpful way to create "Large print" without needing to zoom or enlarge.

- Describe images whenever possible. Screen readers can read coded descriptions instead of saying "image" which gives zero definition of what's on the screen.

- Offer a feedback or support link or contact for customers. This way no matter what your customer can be supported to partake in your services.
